

14th August, 2017

Item: **RF150, Shackle**

Ronstan hereby certifies that these shackles are manufactured under a Quality Management System accredited to AS/NZS ISO9001: 2008, covering the design, sale, manufacture and distribution of a range of architectural, marine and industrial products.

Ronstan hereby certifies that they meet a Breaking Load of 900kg, as stated on our website - www.ronstan.com. We recommend that our products are never loaded higher than 50% of the Breaking Load to ensure a minimum 2:1 safety factor.

An appropriate factor of safety should be applied to the Breaking Load figure to suit each application. For many industrial and safety related applications, a factor of safety greater than two (2) should be used or may be required by law or other regulations. It is the customer's responsibility to ensure that an appropriate factor of safety is used, and it should allow for safety implications, service life, fatigue, orientation of load, exposure to ultraviolet light, corrosion and stress corrosion.

Please refer to Ronstan's terms and conditions on our website for more information regarding customer's considerations.

Yours Sincerely,

Derek Johns
Engineering Manager
